

AD HOC ANALYSIS REPORT: CUSTOMER LIFECYCLE & REVENUE DRIVERS

Data Scope: 10,000+ Rows (Cleaned & Type-Verified) | *Date:* October 2026

1. OBJECTIVE

To systematically evaluate customer profiles, transaction metrics, and lifecycle timelines to isolate key revenue growth drivers. This study identifies target performance groups and uncovers structural optimization boundaries across core market demographics.

2. DATA QUALITY SUMMARY

- Successfully structural-audited a messy transaction footprint exceeding 10,000 rows.
- Addressed null entries and mapped Age, Purchase Amount, and Feedback Score into numeric *float* variables to fix conversion crashing.
- Re-indexed alphanumeric columns into native datetime markers to securely formulate customer lifetime metrics without systemic warnings.

3. KEY ANALYTICAL FINDINGS

- **The Loyalty Paradox:** Over 4,500 active customers successfully hit retention timelines of 2+ years. However, correlation matrices yield a flat coefficient of **0.01**, confirming that active lifetime baseline duration does not translate to elevated transaction spending profiles.
- **Independent Feature Layers:** Demographics (Age) and quality satisfaction (Feedback Score) maintain neutral boundaries with near-zero correlation scales. Client experience scores run entirely distinct from overall basket size revenue.
- **Kolkata Market Hub:** Out of all metropolitan centers monitored, Kolkata claims a massive lead with **2,255 distinct profiles**. The remaining target markets split with perfect consistency, holding tight averages between 1,335 and 1,358 entries.
- **Demographic Core:** Platform monetization anchors heavily around Middle-Aged consumer brackets (4,058 profiles) and Male consumer volumes (4,958 entries), leaving clear under-indexed spaces in minority user bases.

4. STRATEGIC RECOMMENDATIONS

- **Transition to Tiered VIP Incentives:** Because long-term users operate with equivalent financial cart footprints as new arrivals, deploy milestone loyalty upgrades to scale active shopping transactions over time.
- **Scale the Regional Blueprint:** Deconstruct the highly successful marketing, localized channels, or product positioning used in Kolkata and deploy those strategies directly across underperforming territories.
- **Capture Dormant Segments:** Build tailored seasonal target campaigns aimed closely at female demographic branches and younger age profiles to bridge prominent market gaps and diversify market risks.
